

- Are we happy with the current list of FLEX L2 products?
- Which additional / auxiliary data sets are needed?
- What are the requirements on these products in terms of uncertainty?
- Do we have means to validate these products? What are the approaches that should be considered?
- Which data products (beyond fluorescence) are most relevant for modelling activities / data assimilation?

- Which supporting tools should be developed (e.g. tool boxes, software packages)?
- Which model developments are needed to enable the integration of FLEX observations?
- Which test data sets are required in the next two years, three years, prior to launch?
