

SWEA

The Swedish Collaborative Ground Segment

Karin Holmquist
Swedish National Space Board

EO4Baltic, Helsinki 29-31 March 2017

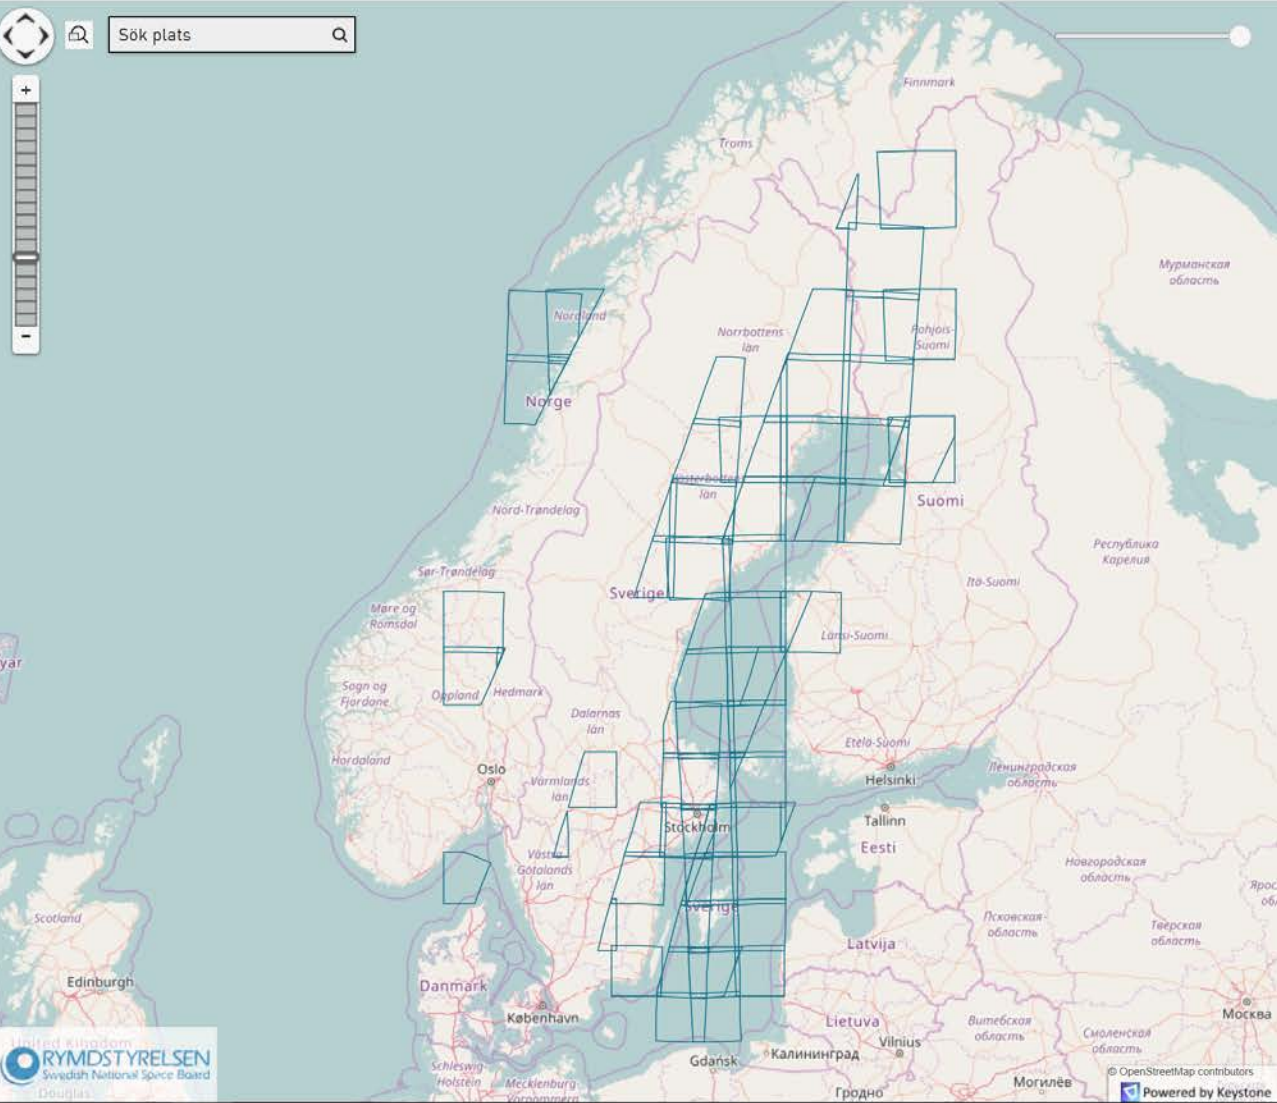

”Swea is the first-hand choice for Swedish users of Earth observation data, a system constantly evolving and developing to meet its users’ needs. It is a platform providing continuous access to open Earth observation data, used to create products and services for institutional and commercial end users, fostering innovation and growth.”

swea.rymdstyrelsen.se

WHAT IS AVAILABLE TO WHOM?

A grid of satellite image thumbnails from Sentinel 2. The thumbnails show various terrain features, including forests, water bodies, and urban areas. Some thumbnails have small icons in the top right corner, likely representing different data layers or processing options. The interface is in Swedish.
